# Material Description

## Certificate Surgical Steel 316L

Surgical steel, also known as 316L and Implant grade steel is a steel alloy that is the most common body piercing material. It can be polished to a shiny surface, and many people prefer this material to titanium because of its luster. 316L surgical steel is used in the manufacture and handling of food and pharmaceutical products where it is often required in order to minimize metallic contamination. It is also used in the manufacture of body piercing jewellery and body modification implants. Many of our Steel body jewellery items have been electropolished, which is a sophisticated surface finishing technique, where electrochemical activity slowly erodes a thin layer from the surface of the jewellery resulting in MICROSMOOTHING. The resultant surface is ultra smooth and crevice free. It has a higher surface integrity and efficiency than jewellery polished by other means.

## Certificate Titanium grade 23

Titanium body jewelry is often manufactured in commercially pure grade 23 Ti6AL4V ELI, also known as Implant Grade Titanium. The grade considered suitable for piercing jewellery use is a disputed topic however the only Grade recommended for use by the association of professional piercers remains Grade 23 Titanium (ASTM F136). Titanium jewellery is lightweight (around 60% the weight of stainless steel given the same volume), it is highly corrosion resistant and less likely to react with body fluids, is not magnetic, it can be anodized to create a layer of colored oxide on the surface. Common colors are yellow, blue, purple, green, and rainbow.

## Acrylic

is a transparent plastic, in piercing mostly used for plugs and tapers. Jewelry made of acrylic has a tendency to collect body fluids and skin parts in tiny pores. This calls for regular cleaning to avoid bad smell and infections.

## Wide Range of Body Jewelry:

Straight Barbells, Tongue Rings, Industrial Barbell, Bananabells, Eyebrow Rings, Navel Belly Rings, Dangling Navel Rings, Fashion Belly Buttons, BCRs (Captive Bead Rings), Segment Rings, Circular Barbells (Horseshoes), Spirals, Labret Piercings, Nose Studs, Flesh Tunnels, Plugs, Fake Piercing, Expanders, Tapers, Dermal Anchor, Nipple Shields, Ear Studs, Earrings, Pendants, Charms, Finger Rings, Bracelets, Body Jewelry Accessories, Anodized & PVD Piercing, etc in Grade 316L Surgical Stainless Steel, Grade 23 Titanium, Acrylic, and other high quality approved materials.

## Strong Team and Well-Organized Department :

Sales Department, Purchase Department, Coordinator Department, Design Department, Warehouse, Crystals Department, Epoxy Department, Packing Department, QC Department, CNC Department, Hand and Machine Polishing Department, Welding Department.

## Advanced and Complete in Equipment :

CNC machines, Instrument Lathes, Screw Machines, Drill Machines, Crystal Setting Machines, Punching Machines, Laser Welding Machines, Polishing Machines, etc.

Our high quality body jewelry with the most competitive factory price and prompt delivery time through our high skills, well-appointed workshop, skilled workers and good production line ensure your satisfaction with each and every product.

# PVD Color Chart

Physical Vapor Deposition (PVD) coatings are extremely thin, usually .05 microns thick. The process involves the deposition of zirconium nitride, titanium nitride, or other metallic ion combinations under low vacuum conditions. The PVD process provides a dense coating that resists wear and discoloration.

Due to several characteristics of PVD coating: high hardness and wear resistance, no discoloration or tarnishing, high corrosion resistance and no attack by UV radiation, PVD coating is applied to stainless steel and titanium body jewelry and last long time.
